ABLSTRACT:

A microcomputer (160) is programmed to determine an amount of ice cubes to be sliced on a basis of operation of either one of size button switches (80a ~ 80c), to determine a mixing time for mixing sliced ice with an amount of beverage on a basis of operation of either one of drink button switches (90a ~ 90c) and to control each operation of a shaving motor (M1) and a mixing motor (M2) for preparation of an amount of cold beverage.
